Anti-malware protection

Threats detected by protection technology

There are no items to show in this view

Antimalware scan of backups

This functionality is not available for the tenant.

Blocked URLs

This functionality is not available for the tenant.

Antimalware scan of files

There are no items to show in this view

Vulnerability assessment and patch management

Patches installed

This functionality is not available for the tenant.

Patched vulnerabilities

This functionality is not available for the tenant.

Disaster Recovery

Disaster Recovery statistics

This functionality is not available for the tenant.

Disaster Recovery servers tested

This functionality is not available for the tenant.

Data Loss Prevention

Blocked peripheral devices

There are no items to show in this view

File Sync & Share

File Sync & Share storage usage by end users

This functionality is not available for the tenant.

File Sync & Share statistics

This functionality is not available for the tenant.

Notary

eSigned documents across end users

This functionality is not available for the tenant.

Notarized files across end users

This functionality is not available for the tenant.

Notary statistics

This functionality is not available for the tenant.

Report terminology

Report terminology	
Workload	A workload is the organization's non-cloud resource, for instance, physical server, physical workstation, virtual machine, physical web hosting server, mobile device, website.
Cloud workload	A cloud workload is the organization's cloud application resource, for instance, Microsoft 365 resource (seat, mailbox, OneDrive, SharePoint Online site, Team), Microsoft Hosted Exchange mailbox, Google Workspace resource (seat, Gmail mailbox, Drive, Shared Drive).
Device	A device is a physical or virtual machine, for instance, server, workstation.
Workloads protection status	The number of protected and unprotected workloads by type at the moment of report generation. The workload is considered protected if at least one protection or backup plan is applied to it, otherwise it is considered as unprotected.
Cloud workloads protection status	The number of protected and unprotected cloud workloads by type at the moment of report generation. The cloud workload is considered protected if at least one backup plan is applied to it, otherwise it is considered as unprotected.
Backup storage usage	The graph showing backup storage consumption by storage types throughout the report date range. Local storage consumption is calculated as sum of usages by all local storage types.
Disk health status by physical devices	The overall disk health status of machines by severity at the moment of report generation. It is defined by the most critical health status of its disks.
